

**AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A distributed industrial process control system comprising:

a central control including a computer system having a controller and a user input/output (I/O) for providing an interface between the computer system and a user, and a wireless communication link associated with the computer system for transmitting and receiving process control and secondary information; and

a distributed network of industrial process control field devices, at least one of the field devices being under the control of the controller and having an associated wireless communication link ~~and being under the control of the controller~~, communicatively disposed between the field device and the controller, for transmitting and receiving process control and secondary information between the field device and the controller to provide wireless communication between the computer system and the field device.

2. (Previously Presented) The system of claim 1, wherein:  
the controller is adapted to control field devices of the distributed network based upon commands from the computer system and for providing data to the computer system based upon signals received from field devices of the distributed network.

3. (Original) The system of claim 1 wherein the field devices are powered from the distributed network.

4. (Original) The system of claim 3 wherein the wireless communication link associated with the field device is powered from the distributed network.

5. (Original) The system of claim 1 wherein the distributed network includes a field module in communication with a plurality of field devices and a wireless communication link associated with the field module to communicate with the plurality of field devices.

6. (Original) The system of claim 1 wherein the distributed network includes a network bridge and a wireless communication link associated with the network bridge to communicate with field devices connected to control networks serviced by the network bridge.

7. (Original) The system of claim 1 wherein the secondary information includes diagnostic data.

8. (Original) The system of claim 1 wherein the central control is capable of communicating with the field device through the wireless communication links for monitoring process variables.

9. (Withdrawn) The system of claim 1 wherein the central control is capable of communicating with the field device through the wireless communication links for performing control actions.

10. (Withdrawn) The system of claim 1 wherein the central control is capable of communicating with the field device through the wireless communication links for performing diagnostics.

11. (Withdrawn) The system of claim 1 wherein the central control is capable of communicating with the field for receiving through the wireless communication links status information.

12. (Withdrawn) The system of claim 1 wherein the central control is capable of communicating with the field device through the wireless communication links for accessing secondary functions of the field devices.

13. (Withdrawn) The system of claim 1 wherein the central control is capable of communicating with the field device through the wireless communication links for performing shut-down procedures.

14. (Withdrawn) The system of claim 1 wherein the central control is capable of communicating with the field device through the wireless communication links for observing critical temperatures and pressures.

15. (Withdrawn) The system of claim 1 wherein the central control is capable of communicating with the field device through the wireless communication links for adjusting device operating characteristics.

16. (Previously Presented) A distributed industrial process control system comprising:

- a plurality of industrial process control field devices;
- a controller controlling the field devices;
- a plurality of wireless communication links, each link associated with at least one of the field devices and communicatively disposed between the at least one of the field devices and the controller; and
- a central control capable of communicating with each of the wireless communication links to transmit data to and receive data from selected field devices.

17. (Original) The system of claim 16 and further comprising:  
a network connecting the plurality of field devices to provide energization and signal transmission.

18. (Original) The system of claim 17 wherein the plurality of wireless communication links are powered from the network.

19. (Original) The system of claim 17 and further comprising:  
a field module connected to the network and in communication with at least two of the field devices and one of the wireless communication links.

20. (Original) The system of claim 17 and further comprising:  
a network bridge connected in the network and connected to one of the wireless communication links.

21. (Original) The system of claim 17 wherein the data includes process control information.
22. (Original) The system of claim 17 wherein the data includes diagnostic data.
23. (Original) The system of claim 16 wherein the central control is capable of communicating with the field devices through the wireless communication links for monitoring process variables.
24. (Withdrawn) The system of claim 16 wherein the central control is capable of communicating with the field devices through the wireless communication links for performing control actions.
25. (Withdrawn) The system of claim 16 wherein the central control is capable of communicating with the field devices through the wireless communication links for performing diagnostics.
26. (Withdrawn) The system of claim 16 wherein the central control is capable of communicating with the field devices through the wireless communication links for providing status information.
27. (Withdrawn) The system of claim 16 wherein the central control is capable of communicating with the field devices through the wireless communication links for accessing secondary functions of the field devices.
28. (Withdrawn) The system of claim 16 wherein the central control is capable of communicating with the field devices through the wireless communication links for performing shut-down procedures.

29. (Withdrawn) The system of claim 16 wherein the central control is capable of communicating with the field devices through the wireless communication links for observing critical temperatures and pressures.

30. (Withdrawn) The system of claim 16 wherein the central control is capable of communicating with the field devices through the wireless communication links for adjusting device operating characteristics.

31. (Previously Presented) A distributed industrial process control system comprising:

a controller;

a plurality of industrial process control field devices under the control of the controller;

a plurality of wireless communication links associated with the field devices and communicatively disposed between the field devices and the controller;

a network for providing power to the field devices and the wireless communication links; and

a central control capable of communicating with the field devices through the wireless communication links.

32. (Original) The system of claim 31 wherein the network is connected to the field devices and the central control to provide a signal transmission path therebetween.

33. (Original) The system of claim 31 wherein the wireless communication links communicate process control information.

34. (Original) The system of claim 33 wherein the wireless communication links communicate secondary information.

35. (Original) The system of claim 31 wherein the field devices are capable of performing diagnostic functions and wherein the wireless communication links communicate diagnostic data.

36. (Original) The system of claim 31 wherein the central control is capable of communicating with the field devices through the wireless communication links for monitoring process variables.

37. (Withdrawn) The system of claim 31 wherein the central control is capable of communicating with the field devices through the wireless communication links for performing control actions.

38. (Withdrawn) The system of claim 31 wherein the central control is capable of communicating with the field devices through the wireless communication links for performing diagnostics.

39. (Withdrawn) The system of claim 31 wherein the central control is capable of communicating with the field devices through the wireless communication links for providing status information.

40. (Withdrawn) The system of claim 31 wherein the central control is capable of communicating with the field devices through the wireless communication links for accessing secondary functions of the field devices.

41. (Withdrawn) The system of claim 31 wherein the central control is capable of communicating with the field devices through the wireless communication links for performing shut-down procedures.

42. (Withdrawn) The system of claim 31 wherein the central control is capable of communicating with the field devices through the wireless communication links for observing critical temperatures and pressures.

43. (Withdrawn) The system of claim 31 wherein the central control is capable of communicating with the field devices through the wireless communication links for adjusting device operating characteristics.

44. (Previously Presented) The system of claim 1, wherein the wireless communication link associated with the at least one of the field devices is disposed on a field module communicatively connected to the field devices via a hard-wired communication link.

45. (Previously Presented) The system of claim 1, wherein the wireless communication link is disposed on the at least one of the field devices.

46. (Previously Presented) The system of claim 1, wherein the wireless communication link associated with the at least one of the field device is adapted to communicate directly with the wireless communication link associated with the computer system.

47. (Previously Presented) The system of claim 16, wherein at least one of the plurality of wireless communication links is disposed on the at least one of the field devices.

48. (Previously Presented) The system of claim 31, wherein at least one of the plurality of wireless communication links is disposed on at least one of the field devices.

**REQUEST TO ENTER AND RECORD**  
**THE REVOCATION OF NEW POWER OF ATTORNEY**  
**AND REQUEST FOR CHANGE OF ADDRESS FOR THIS APPLICATION**

**Applicants adamantly request the Examiner/Office enter and record the Revocation of Power of Attorney/New Power of Attorney and Request for Change of Address for this application.**

This request now represents the **fifth** such request made by the Applicants during the prosecution of this application. The **first** request was submitted on May 3, 2004, which included a Revocation of Power of Attorney, New Power of Attorney and Request for Change of Address. **Second** and **third** requests were made on May 12, 2005 and October 3, 2006, respectfully, resubmitting copies of the Revocation of Power of Attorney, New Power of Attorney and Request for Change of Address documents. Finally, in response to the previous office action of March 9, 2006, a **fourth** request was made of the Office to enter and record the Revocation of Power of Attorney, New Power of Attorney and Request for Change of Address for this application.

Applicants hereby request, for a fifth time, that the Examiner/Office enter and record the Revocation of Power of New Power of Attorney and Request for Change of Address for this application. For the convenience of the Office, applicants include herewith another copy of the Revocation of Power of Attorney, New Power of Attorney and Request for Change of Address. If the Office is unable or is refusing to enter the enclosed Revocation of Power of Attorney, New Power of Attorney and Request for Change of Address for some reason, the Office is respectfully requested to inform the Applicants as to the reason why the Office finds the Revocation of Power of Attorney, New Power of Attorney and Request for Change of Address deficient.

Moreover, if there are *ANY* issues with entering this Revocation of Power of Attorney, New Power of Attorney and Request for Change of Address, the Examiner is respectfully requested to contact the undersigned attorney, so that this issue may be corrected prior to the mailing of the Advisory Action or the next office action in this case, to thereby provide for more timely consideration by the Applicants.
